

BORN *Information* BITS – Midwifery

BORN Information System Clinical Reporting

Midwifery Care Profile - Birth

The Midwifery Care Profile – Birth report is available for midwifery practice group users to generate and review as of May 1, 2014. This is the third available Standard Report and will be followed by a Labour Report, a Newborn Report and a Utilization of Services report .

Who has access to the Standard Clinical Reports?

Any BIS user who has access to MW Data Analysis – Clinical Reports as part of their user rights will have the ability to generate these reports. Have the Local Administrator of your practice group confirm access.

Local Administrators should go to Administration: User Management. Select the user id to be reviewed and confirm access to reports. If changes are made, make sure you click Save.

Reports may be run on three levels by anyone who has access to MW Data Analysis – Clinical reports. The three levels include:

- Midwifery Practice Group – all Courses of Care for the MPG

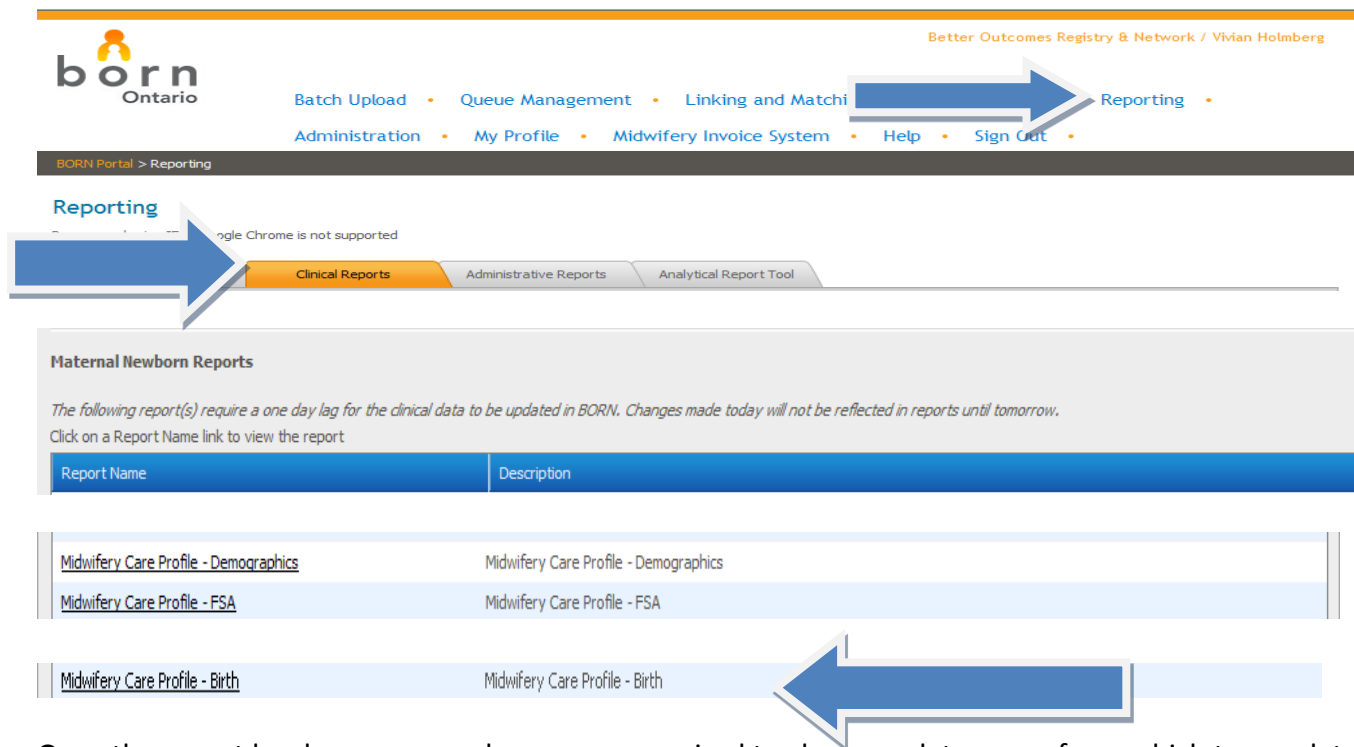

- Primary Midwife – Primary midwife who attended the birth

- Coordinating Midwife – midwife designated as Coordinating Midwife

Provincial midwifery stakeholders will also have access to these reports on an aggregate basis.

How do I access the Standard Clinical Reports?

To access Clinical Reports click on Reporting on the landing page of the BORN Information System. Choose Clinical Reports, and then select one of the two available reports.

Once the report has been accessed, users are required to choose a date range from which to run data. This date range is by newborn date of birth. Enter both the start and end date parameters.

Organization and Calendar type should be confirmed.

The report filter should be selected to have it run on practice level data, by Primary Midwife or by Coordinating Midwife. Stakeholders running the aggregate report will not have this option.

The choice of whether or not to expand rows must also be selected. The expand rows function allows the report to be displayed at the monthly level. Monthly level reporting allows users to get a sense of the proportion of active practice groups that have acknowledged their BIS data.

Once selections have been made, click: View Report.

Midwifery Care Profile - Birth

Newborn DOB Start: 4/1/2012 Newborn DOB End: 3/31/2013 [View Report](#)

Organization: Access Midwives (MPG159) Calendar Type: Fiscal

Filter by: MPG Object: All courses of care

Expand Rows: MPG, Primary Midwife, Coordinating Midwife

Reports run without expanded rows will look like this:

born Ontario Midwifery Care Profile - Birth												
Type of birth												
Association of Ontario Midwives (AOM), infants born from 01-Apr-2012 to 31-Mar-2013												
	Total women who gave birth		Primipara		Multipara		Singleton, vertex, term, no previous CS		Missing data		Acknowledgment	
	n	% (col)	n	% (col)	n	% (col)	n	% (col)	n	% (col)		
Midwifery clients in Ontario	12,745	84.4	5,080	77.2	7,665	89.8	4,483	81.6	6,554	97.8	0	0.0
Vaginal	2,364	15.6	1,497	22.8	866	10.2	1,011	18.4	147	2.2	<6	5
Cesarean	15,109	100.0	6,577	100.0	8,531	100.0	5,494	100.0	6,701	100.0	<6	5
Total women who gave birth	15,109	100.0	6,577	100.0	8,531	100.0	5,494	100.0	6,701	100.0	<6	5

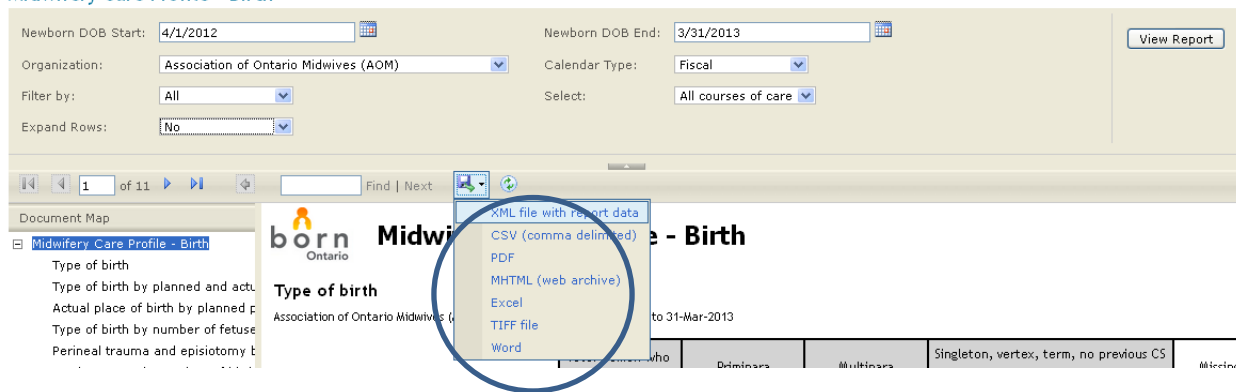

Reports with rows expanded display monthly data. The right column displays the proportion of practice groups who have acknowledged their data on a monthly basis.

Reports are best reviewed when exported to Excel or other software.

Once the report has been run, click on the icon noted below to export to the chosen program. This picture also demonstrates information supplied by the expanded row function.

Midwifery Care Profile - Birth

The first tab of reports exported to Excel provides a list of the individual tabs. Users can get to the individual tabs by selecting the name of the tab in the document map or by choosing the tab at the bottom row of the spreadsheet.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S
1	MW Care Profile Birth

11	Measuring normal birth and early postpartum by planned and actual place of birth																		
12	Report version history																		
33																			

Below each table is the definition of the information presented in the table along with notes to explain data considerations.

No specific client details are revealed in Standard Clinical Reporting

To comply with PHIPPA, any values less than 5 are suppressed

Acknowledgement and Data Quality

The data presented at the practice group or midwife level may or may not be Acknowledged. "Acknowledgement" is the process those responsible for data entry complete in order to confirm data accuracy.

Practice groups who have gaps in the Acknowledgement of data will not have their information included in monthly comparisons until each month is Acknowledged. Low acknowledgment therefore reduces the volume of births available for provincial comparison.

Users can find Data Quality Management instructions on the www.bornontario.ca website.

Questions should be directed to the BORN Midwifery Coordinators:
